

Application Load Balancer: Create an EC2 Instance with User data as below

The image shows two screenshots of the AWS Management Console. The top screenshot displays the 'Launch instances' page where user data is being configured. The bottom screenshot shows the 'Instances' page with two pending Elastic Load Balancing instances.

Top Screenshot: Launch instances page

Allow tags in metadata [Info](#)

Select

User data [Info](#)

```
#!/bin/bash
sudo su
yum update -y
yum install httpd -y
echo "Hello World from $(hostname -f)" > /var/www/html/index.html

systemctl start httpd
systemctl enable httpd
```

☐ User data has already been base64 encoded

ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#SelectCreateELBWizard:

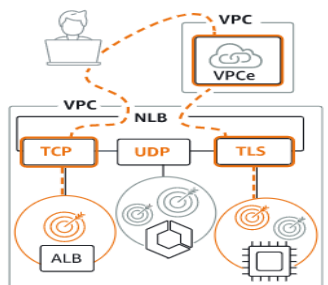

aws Services Search [Alt+S] Mumbai Bhargav L N S N

Application Load Balancer Info

Choose an Application Load Balancer when you need a flexible feature set for your applications with HTTP and HTTPS traffic. Operating at the request level, Application Load Balancers provide advanced routing and visibility features.

Network Load Balancer Info

Choose a Network Load Balancer when you need ultra-high performance, TLS offloading at scale, centralized certificate deployment, support for UDP, and static IP addresses for your applications. Operating at the connection level, Network Load Balancers provide advanced routing and visibility features.

Gateway Load Balancer Info

Choose a Gateway Load Balancer when you need to deploy and manage a fleet of third-party virtual appliances that support GENEVE. These appliances enable you to improve security, compliance, and policy controls.

Security groups [Info](#)

A security group is a set of firewall rules that control the traffic to your load balancer.

Security groups

Select up to 5 security groups

Create new security group [+](#)

default sg-03fbbe6581654de69 VPC: vpc-025c74b83c4029a80

launchwizard1 sg-08f092821121b61a7 VPC: vpc-025c74b83c4029a80

Listeners and routing [Info](#)

A listener is a process that checks for connection requests using the port and protocol you configure. The rules that you define for a listener determine how the load balancer routes requests to its registered targets.

▼ Listener HTTP:80

Adrenalin MAX | Mail - Bhargav | Load balancers | Target groups | CloudFront

ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#CreateTargetGroup:protocol=HTTP:vpc=vp...

EC2 > Target groups > Create target group

Step 1
Specify group details

Step 2
Register targets

Specify group details

Your load balancer routes requests to the targets in a target group and performs health checks on the targets.

Basic configuration

Settings in this section cannot be changed after the target group is created.

Choose a target type

☒ Instances

- Supports load balancing to instances within a specific VPC.
- Facilitates the use of [Amazon EC2 Auto Scaling](#) to manage and scale your EC2 capacity.

☐ IP addresses

- Supports load balancing to multiple IP addresses and network interfaces on the same instance.
- Offers flexibility with microservice based architectures, simplifying inter-application communication.
- Supports IPv6 targets, enabling end-to-end IPv6 communication, and IPv4-to-IPv6 NAT.

ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#CreateTargetGroup:protocol=HTTP:vpc=vp...

aws Services Search [Alt+S] Mumbai Bhargav L N S N

Over the history for a Network Load Balancer to accept and route TCP requests within a specific VPC.

Facilitates using static IP addresses and PrivateLink with an Application Load Balancer.

Target group name

loadbalancer

A maximum of 32 alphanumeric characters including hyphens are allowed, but the name must not begin or end with a hyphen.

Protocol

HTTP

Port

80

VPC

Select the VPC with the instances that you want to include in the target group.

vpc-025c74b83c4029a80
IPv4: 172.31.0.0/16

Protocol version

☒ HTTP1
Send requests to targets using HTTP/1.1. Supported when the request protocol is HTTP/1.1 or HTTP/2.

☐ HTTP2
Send requests to targets using HTTP/2. Supported when the request protocol is HTTP/2 or gRPC, but gRPC-specific features are not available.

☐ gRPC
Send requests to targets using gRPC. Supported when the request protocol is gRPC.

aws Services Search [Alt+S] Mumbai Bhargav L N S N

☑ **Successfully created load balancer: applicationloadbalancer**
Note: It might take a few minutes for your load balancer to be fully set up and ready to route traffic. Targets will also take a few minutes to complete the registration process and pass initial health checks.

EC2 > Load balancers > applicationloadbalancer > Create Application Load Balancer

Create Application Load Balancer

Suggested next steps

- Review, customize, or enable attributes for your load balancer and listeners using the **Description** and **Listeners** tabs within [applicationloadbalancer](#).
- Discover other services that you can integrate with your load balancer. Visit the **Integrated services** tab within [applicationloadbalancer](#).

[View load balancer](#)
